1. Things That Went Well

We were able to implement the core features from the sprint backlog and provide a minimal viable product (MVP).

2. Things That Could Have Gone Better

To reduce the number of merge conflicts.

3. Things That Surprised Us

The development team implemented the core features without initially creating test cases for said features, which surprised the team and caused us to lose valuable time.

4. Lessons Learned

To always test before implementing features from the sprint backlog

5. Final Thoughts

Things to keep is our original idea of our own feature which is creating a category filter for events

Things to change/update is the user stories and tasks, which are discussed in the SRS documentation.
